—Cindy Carraway-Wilson, Brunswick, ME

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Justin Pharr, Naperville, IL

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Bill Waddy, Philadelphia, PA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Babak Saberi, Moorpark, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Tyler Williams, Greenfield, NH

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Greg Saven, City, OH

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Connie Cramer, Fayetteville, AR

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Kyle Geisler, Austin, TX

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online. We need much more than what the FCC is demanding. The broadcasters need to do much more to serve the public, especially providing for much more local news and public service activity. No other business gets so much from the public and provides so little in return.

—James F. Morrison, Gainesville, FL

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Erica Zissman, Waltham, MA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. —Duane Webster, Boulder, CO

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. Our media is a major contributor to our new national "culture of death." There is almost nothing to watch on commercial TV any more; it's usually a choice between watching women being brutally murdered, butchered, then autopsied, or men blowing each other up, or vampire parties, or the old re-runs (which is what I choose) that I've seen so many times I can almost mouth the words. Of course, 30% of this programming is commercials. Public broadcasting has the only worthwhile programming. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Marian Schwarzenbach, Seattle, WA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. —Mr. Gabriel Reed, Cotati, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Frances DeMillion, Kennett Square, PA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Donna Luna, santa rosa, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Ken Frazier, Saint Louis, MO

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Jan Lubin, Honolulu, HI

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—David Scott, Ontario, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Peggy Stewart, Ferndale, WA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Gordon Rowe, des moines, IA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. —Martina Preti, Mountlake Terrace, WA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Kelli Lent, Alameda, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Carrie Weatherly, Allen, TX

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online. While you have a national lobby in Washington, we the people do not. We are the ones that watch the crap that you send over the free air, ah yes; you had to get the digital equipment; but that still does not keep you from sharing electronics records of what you put over the airwaves on-line. If there is a cop-out of not being computer savvy, I am not buying it. If the broadcasters don't understand a computer by now, send them back to school to learn. The American users have long been given the shaft on public records, I say its time to get these stations to get them where we can easily find their programming records. If they have files offsite, then they need to be digitized. Oh, now thats another learning cure. If they can't do that, hire me to do it for them.

—Kent Stutzman, Newton, KS

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—L Henry, Eugene, OR

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. Via Electronic Filing

Re: MM Docket No. 00-168, Standardized and Enhanced Disclosure Requirements for Television Broadcast Licensee Public Interest Obligations

Dear Ms. Dortch:

Attached please find the signatures of nearly 5,000 people urging the Federal Communications Commission to require that broadcasters document their public service programming in a searchable online database.

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves.

In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should move forward with its common-sense plan to require that broadcasters put local programming information online.

Respectfully submitted,

_____/s/_____

—Esther Lapin, Charleston, SC

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online. Their whining makes no sense. We all know that technology is at the heart of how they operate their equipment and scheduling. They whine because they don't want to be held accountable with records they would need to keep. That's just shirking their responsibility to the public so they can do whatever they want. That attitude simply doesn't work anymore.

—Todd Hill, Broomfield, CO

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online. At 94. I've had more than 60 working years as educator and journalist; My Dad was investigative reporter on Mencken's famed Baltimore SUN; and I have four sons active for some years in journalism, with two still fighting the battle. Nowadays the public simply does not know what is happening to local programming. Putting the details into the open public record via the Internet is one most essential step which should be taken ASAP ! hankatma@ipns.cpm Henry Clay Ruark

—Henry Clay Ruark, Seaside, OR

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. —Gerald Jehle, Beulah, MI

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Michela Verani, Londonderry, NH

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Cynthia Guggemos, Blanchardville, WI

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—James Kubesch, Oakland Park, FL

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Claire Mikalson, Pullman, WA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Alexander Lumans, Boulder, CO

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Hazel Dawkins, Greenfield, MA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—William Stone, Carrboro, NC

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Mary Davis, Alliance, OH

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Basil El Halwagy, Somerville, MA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Alfred Wilson, Lowell, MA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Terra Hadley, Ferndale, WA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Douglas Gruenau, Santa Fe, NM

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Joel Dowling, Prospect Park, PA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Barbara Whipperman, Richmond, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Douglas Kister, Hatboro, PA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Allyssa Correia, Cloverdale, CA

Although broadcasters are private corporations, they rely on the government to provide them exclusive access to a portion of the public airwaves. In return, they are supposed to serve the public interest with programming that reflects the needs and interests of both the community and democratic society. The public has a right to reasonable review of what that programming consists of. In the second decade of the 21st century, the common-sense way to accomplish that is by putting the information available on the Internet. Yet the broadcasters are complaining that this is too difficult? The FCC should ignore broadcasters' nonsensical whining and move forward with its plan to require that broadcasters put local programming information online.

—Jack McGregor, Woodland Hills, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Anthony Cokes, Providence, RI

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Joel Haffey, Atlanta, GA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Courtney Skybak, Portland, OR

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—James R Damare, Sterling, VA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Vincent Christensen, Oak Ridge, TN

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Charles Uphoff, Fitchburg, WI

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online. For years I've watched TV programming sinking lower and lower, while broadcasters pocket more and more money, charging for everything under the sun. I grew up in a time when TV was free. It's time to stop allowing broadcasters to ignore their audience's needs while stuffing celebrity gossip, puff pieces promoting their own products, recycled "news", endless "reality shows" and the like down our throats.

—Nita Sembrowich, Cambridge, MA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Jared and Judy Jenkins, Boise, ID

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—James Brown, El Cerrito, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Flurry Dowe, San Diego, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Valerie Juarez, Sour Lake, TX

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—William D Henderson, Trenton, NJ

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Angela Cresser, Warwick, NY

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Elizabeth Garratt, Indianapolis, IN

I tend to watch television only for the news anymore - because of how you've abused your priviledges. And even with the news. it seems you've redefined the word to mean commercials! Frankly, I feel the media amalgamation was a bad idea from the git go. And I'm forming a group of likeminded citizens to demonstrate that the media amalgamation is "too big to fail," so in accordance to our anti-trust laws, it needs to be broken up. Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Patricia Flanagan, West Warwick, RI

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Kim Falcone, Wakefield, RI

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Forest Gregory, Martinez, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Devin de Gruyl, Grove City, OH

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online. People are waking up- largely due to the internet. Your days of being able to control the message are over-get over it, grow up and evolve. on the other hand, you could ignore the obvious (as you are so good at doing) and be swept aside and relegated to a minor footnote of history- and not one with a positive SPIN.

—Gordon Arlt, Richland, WA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Adam Boudreaux, Picayune, MS

Broadcasters profit enormously from free use of the public (i.e. "OUR") airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online. This step forward must not be stopped by this kind of whining...These people have gotten uber-rich through use of 'public' airwaves; this fight over accountability is another effort to avoid making public what should be public! Please, FCC, do your job and insist that these people abide by the rules and regulations that other businesses must abide by. Thank you for your consideration.

—TL Sutton, Oakland, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Gwen Hadland, Hillsboro, OR

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Mr. James Plunkett, Portland, OR

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. Making concerned members of the public do "detective work," and forcing them to travel to frequently hard-to-find offices to request these records is an unreasonable burden and barrier to access. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Lenka Reznicek, Chicago, IL

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Susan James, Lewis Center, OH

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Paul Nass, Racine, WI

—Robert D Ritchie, Elizabethton, TN

Stop complaining. FYI, we don't watch or listen to your idiot-level, commercial-infested networks any more because you don't serve our needs. You might as well go broadcast to the moon. You, broadcasters, profit enormously from free use of the PUBLIC AIRWAVES. In exchange, you're supposed to serve the public interest with programming that reflects our community needs. We, the public, have a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Margaret Weston, Lytle, TX

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Thomas Pilon, New Haven, NY

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Jordan Fishman, Hollywood, FL

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—William Bradford Richardson, Monroe, WI

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online. Broadcasters programming is dictated by their corporate sponsors and as such no news or comments that would disparage the corporations or reveal information that could harm corporate executives will ever be broadcasted. Please hold broadcasters to their contract with the American people and broadcast more points of view. Thank you Lori

—lori Norman, panorama City, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. —Richard L Cullen, edinburg, NY

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Renna Shesso, Denver, CO

I am writing to express my strong support for your proposal to require TV stations keep basic records on what kinds of programming they put on the air - and that they put these records on the Internet, so it is easier for people to view them. With nearly every other industry doing this along with the government, there is no credible reason that the broadcasting industry cannot do the same. Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. However, in most cases they fail to do so. The public has a right to know what that programming involves in order to judge whether they are holding up their end of the bargain. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' pathetic whining complaints and move forward with its common-sense plan to require that broadcasters put local programming information online. This is the minimum that should be required of them. Thanks for considering my comments.

—Donna McKee, Lederach, PA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Eric Boyd, Olympia, WA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. —Dan Fye, Palmetto Bay, FL

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Ben Kreider, Muncie, IN

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. More, the public has a right to know who is controlling the airwaves by pressuring broadcasters to adopt specific political points of view in exchange for buying enormous amounts of commercial airtime. No one, even the NAB, pretends to be naive enough to say the biggest buyers lack enormous clout over newscast bias and what topics get air time and what topics are ignored. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online. MOST IMPORTANT, however The FCC needs to rescind licenses that have created virtual media market monopolies. Viacom, Time-Warner, News Corp. et al control 90-plus percent of the content available to citizens nationwide. The FCC needs to return to the days of limiting media ownership to one or two outlets in any given market. The consolidation of media ownership in the past 20 +/- years means it is virtually impossible for the public interests to be served. The only interests being served are the profits of the few remaining media monsters mentioned above. Efforts to broaden media ownership and offerings while demanding full transparency of programming, ad buyers and other financial information as it pertains to a public resource is long overdue.

—William Killpatrick, Lafayette, NJ

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Marsha Goodman-Wood, Washington, DC

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Joyce Mercer, Tampa, FL

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Steve Perrett, Birmingham, AL

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Mae Basye, Fuquay Varina, NC

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. —Chris Brockman, Franklinton, NC

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Shirley Tomczak, Dryden, MI

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Michael Pace, Philadelphia, PA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Daniel Adelman, Carrboro, NC

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Rachel Scott, Whitewater, WI

When the FCC was established, they were chartered with the responsibility of ensuring that access to the broadcasting frequencies be regulated, in the specifications of frequency, stability, bandwidth and modulation levels, as well as content. Vulgarity was not allowed. Equal-time for opposing views was guaranteed, as was the requirement for carrying local information. Ownership was strictly controlled in order to prevent usurping of the airwaves by any one politically motivated group. Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online. I want to see the rules restored to what they used to be, plus the public disclosure of their content. As it stands now, there is little of value available on any broadcast medium. I urge the FCC to bite the bullet and return the airwaves to the people's benefit, not for the politicians and mega-billionaires.

—Russell Ranshaw, Port Colborne, ON L3K 5E3, Canada, OH

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Margaret Austin, Nevada City, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—Linda Ferguson, Chandler, AZ

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

—William P Cody, Benicia, CA

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online.

The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online. The airwaves belong to the citizens not the media. If the media owners don't want to be accountable, their licenses should not be renewed. A broadcast license is a public trust. If the license holder cannot serve the public interest then they should have their license revoked. A 5am public affairs show or a newscast filled with sensationalism does not fulfill the public interest.

—Ralph Horton, Longwood, FL

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet. The FCC should ignore broadcasters' whining and move forward with its common-sense plan to require that broadcasters put local programming information online. Don't you have any balls?? Or have you been completely emasculated by your disinclination to impose the public interest upon those for whom the public just means another source of profit, that is, the network of private media interests. It is particularly galling that these broadcasters make their ridiculously large profits by "owning" frequencies that are public in nature and which you have sold to the highest bidder...in theory all done in the public interest --- hah hah! Your apparent disinclination to expose how these private interests are making their profits at the expense of the public interest renders useless your agency as a vehicle for regulating a balance between private and public interests. So either you should all resign out of a sense of shame at having failed miserably in your role as public watchdog and protector or you should change radically your pathetically passive nature and force these corporations to tell us something they really would rather keep secret but which is really something we the public ought to know.

—Full Name*ben Lichtin, city, NY

Broadcasters profit enormously from free use of the public airwaves. In exchange, they're supposed to serve the public interest with programming that reflects community needs. The public has a right to know what that programming involves. In 2012, the best way to make that information widely available is to put it on the Internet.
